HARMER COVERINGS

Wall Panels

+79624274722

產品結構&性能描述 PRODUCT STRUCTURE & PERFORMANCE DESCRIPTION

1. 裝潢層

裝潢層擁有多樣化的面料，包括PP膜、PVC膜、PET膜、金屬膜、水性十字布基膜等。

1. Decorative layer

The decorative layer has a variety of fabrics, including PP film, PVC film, PET film, metal film, water-based cross fabric base film, etc.

2. 超硬晶瓷層

晶瓷層採用亞克力配方體系，擁有極好的硬度和耐衝擊力。

2. Super hard crystal ceramic layer

The crystal ceramic layer adopts an acrylic formula system, which has excellent hardness and impact resistance.

3. 竹炭纖維層

基材芯層為竹炭纖維層，是PVC樹脂粉、竹炭纖維粉、天然碳酸鈣粉的合成材料。

3. Bamboo charcoal fiber layer

The core layer of the substrate is a bamboo charcoal fiber layer, which is a synthetic material of PVC resin powder, bamboo charcoal fiber powder, and natural calcium carbonate powder.

4. 超硬晶瓷層

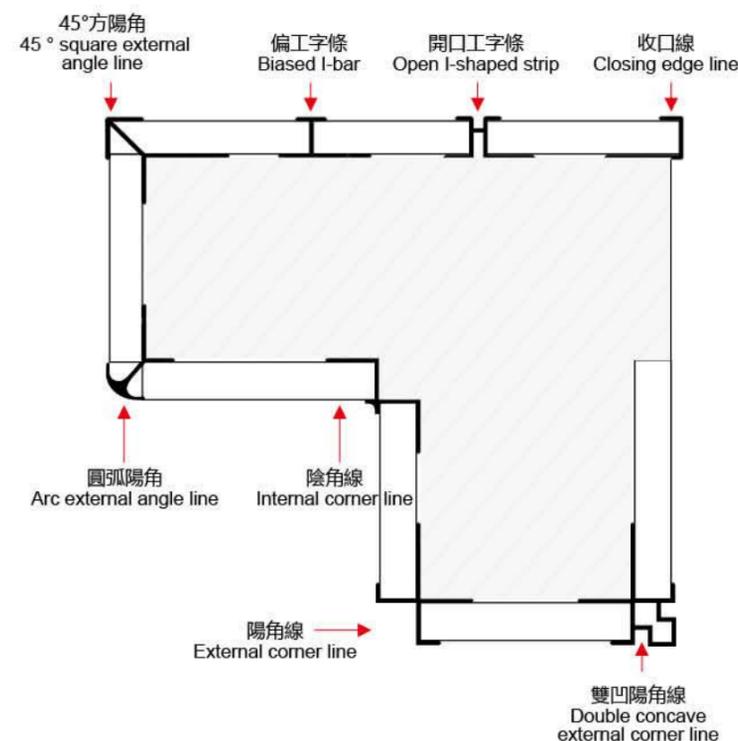

此晶瓷層同第二層，採用亞克力配方體系，與另一層晶瓷層和芯層形成了三層結構。

4. Super hard crystal ceramic layer

This crystal ceramic layer is the same as the second layer and adopts an acrylic formula system, forming a three-layer structure with another crystal ceramic layer and core layer.

碳晶板安裝分布圖

INSTALLATION DISTRIBUTION DIAGRAM OF CARBON CRYSTAL PLATE

碳晶板/木飾面大板安裝方式、流程及注意事項：

一、先勘察牆面是否平整。若牆面平整，可免打底安裝碳晶板/木飾面大板；若牆面不平整，須先通過夾板/石膏板/水泥板找平，再進行安裝貼合。

二、對整面牆寬度量尺，以確定實際安裝時每片飾面板的裁切寬度。注意門、窗戶所處的水平位置，做好分布。一般較寬的牆面選擇直接用1220大板鋪裝，較窄的牆面計算好實際尺寸，平均分切好飾面板的寬度，再貼合為好。

三、實際安裝時，先裝頂角線，再裝陰角線。面對牆面，從左往右開始貼合。先將結構膠採用點狀（或S型），比較平均塗抹在牆面（或飾面板的背面），再將飾面板斜插進頂角線，調整水平位置，再將飾面板由右往左插入左邊陰角線內。

四、用橡皮錘將飾面板的四邊、及中間位慢慢敲平，在飾面板的右邊插入金屬工字條，注意松緊合適。再用槍釘將工字條固定。如此循環安裝即可。

五、注意各類金屬線條的應用場景。在量尺的時候，仔細勘察，做好統計；備貨時，以飾面板的數量及房間結構為依據，配好足夠數量的金屬線條，以免出錯延誤安裝。

碳晶板是時下最流行的牆面裝飾材料之一，廣泛應用於各類商業空間、酒店公寓、學校、醫院、住宅、及其他工程類裝飾裝修領域，它具有以下產品特性：

Carbon crystal board is one of the most popular wall decoration materials at present, widely used in various commercial spaces, hotels, apartments, schools, hospitals, residences, and other engineering decoration fields. It has the following product characteristics:

一、極佳的產品穩定性。 我司碳晶板的基材是三層結構，面層和底層為晶瓷層，中間芯層為竹炭纖維層。 三層結構的產品，具有極佳的穩定性，抗變形能力非常優越。

1. Excellent product stability. The substrate of our carbon crystal board is a three-layer structure, with a crystal ceramic layer on the surface and bottom layer, and a bamboo carbon fiber layer in the middle core layer. The product with a three-layer structure has excellent stability and excellent deformation resistance.

二、超高的環保效能。 我司碳晶板生產全程採用環保鈣鋅穩定劑，摒棄傳統的鉛鹽穩定劑； 粘劑採用進口PUR膠水。 綠色環保，雙倍呵護！

2. Ultra high environmental performance. Our company uses environmentally friendly calcium zinc stabilizers throughout the production of carbon crystal plates, abandoning traditional lead salt stabilizers; The adhesive adopts imported PUR adhesive. Green and environmentally friendly, double caring!

三、表面飾材的多樣性。 我司與國內優秀牆面面料廠家建立了長期、持久的合作關係，所採用的面料有傳統的PVC膜，PP膜，PET膜，皮革，金屬膜，水性十字布基膜等等。 在視覺呈現方面，既可以樸素無華，也可以無比奢華。

3. The diversity of surface decoration materials. Our company has established a long-term and lasting cooperative relationship with excellent domestic wall fabric manufacturers, using traditional PVC film, PP film, PET film, leather, metal film, water-based cross fabric base film, and so on. In terms of visual presentation, it can be both plain and luxurious.

四、加工及安裝工藝的多樣性。 我司碳晶板生產自有大型擠出機，從擠出到平貼，一氣呵成。 我們還可以提供後段的加工，擁有大型雕刻機、重型開槽機，可以隨意雕刻任意尺寸，以及將碳晶板開具雙母槽、公母槽（平扣）、公母槽（鎖扣）、自然U縫等扣型。 這樣大大降低了安裝時的安裝難度，提高了交付時所呈現的效果。

4. The diversity of processing and installation processes. Our company's carbon crystal board production has its own large-scale extruder, which is seamless from extrusion to flat pasting. We can also provide processing for the rear section, with large engraving machines and heavy-duty slotting machines, which can carve any size at will. We can also create double female grooves, male female grooves (flat buckles), male female grooves (lock buckles), natural U-seams, and other buckle types for carbon crystal plates. This greatly reduces the difficulty of installing the port and improves the effect presented during delivery.

Installation method, process, and precautions for carbon crystal board/wood veneer board:

1. First, investigate whether the wall is flat. If the wall is flat, there is no need to install carbon crystal board/wood veneer board as a base; If the wall is uneven, it must be leveled with plywood/gypsum board/cement board before installation and bonding.

2. Measure the width of the entire wall to determine the cutting width of each decorative panel during actual installation. Pay attention to the horizontal position of the doors and windows, and ensure proper distribution. Generally, wider walls are paved directly with 1220 large boards. For narrower walls, calculate the actual size, evenly cut the width of the decorative panels, and then fit them together.

3. During actual installation, install the top corner line first, and then install the bottom corner line. Facing the wall, start fitting from left to right. Firstly, use a point like (or S-shaped) structural adhesive and apply it evenly to the wall surface (or back of the decorative panel). Then, insert the decorative panel diagonally into the top corner line, adjust the horizontal position, and then insert the decorative panel from right to left into the left corner line.

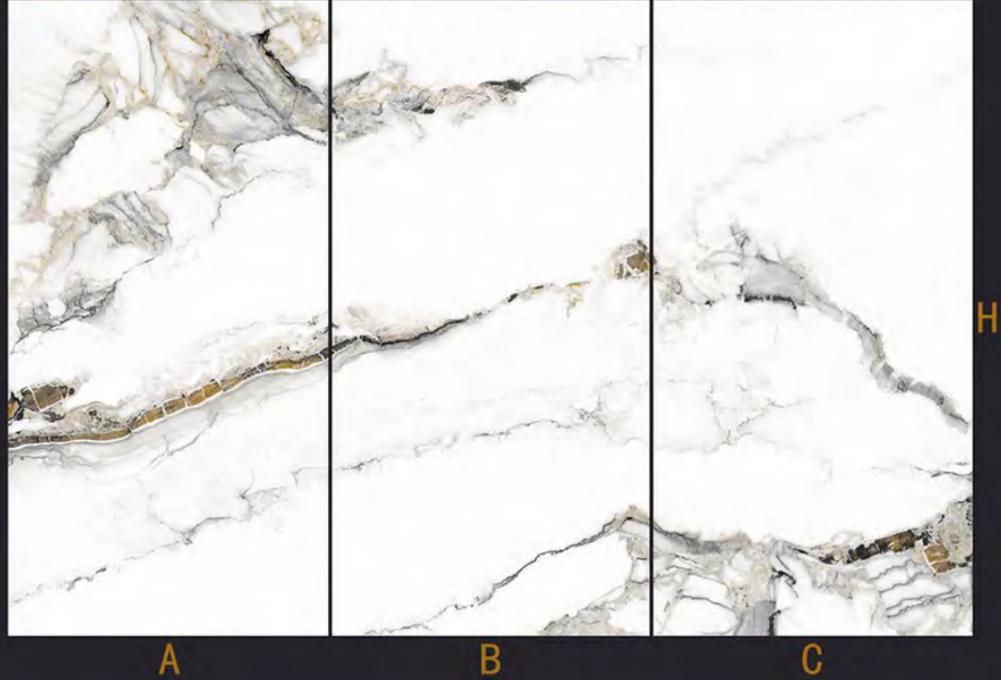

4. Slowly flatten the four edges and middle position of the decorative panel with a rubber hammer, and insert a metal I-shaped strip on the right side of the decorative panel, paying attention to the appropriate tightness. Fix the I-shaped strip with a gun nail. This cycle of installation is sufficient.

5. Pay attention to the application scenarios of various metal lines. When measuring with a ruler, carefully survey and make statistics; When stocking, prepare sufficient quantity based on the number of decorative panels and room structure, measure the metal lines to avoid errors and delays in installation.
